The goal of the application is to assist architects, engineers, and other professionals in the creation of drawings and designs. AutoCAD uses an object-oriented approach and is based on the xRef format used by the first commercial CAD program of the 1970s. History AutoCAD started as a drafting program written by Bob Pease and Dick Bryant at the University of Utah for the PLATO interactive computing system, which was created in 1966 by the U.S. Department of Defense (DoD) to test the viability of interactive computing. At the time, this effort was part of the Advanced Research Projects Agency. Later, in 1968, at the request of PLATO program director Daniel Boucher, the two developed the PLATO Programming Language. The PLATO programming language, which was used to create the first U.S. software application, was a multitasking operating system and programming language for the PLATO mainframe. The program was initially named PLATO Programming Language and is now known as PL/1, developed by the PLATO developers and released to the public in 1970. PL/1 was not commercially available. After writing PLATO Programming Language, Bob Pease and Dick Bryant began to create a commercial drafting program for PLATO. In 1968, the two created a program, known as PLATO Drawing Language (PDL), which was a block-structured language that could be used for specifying a graphical design. PDL was used for specifying the look and feel of the PLATO graphic display, but could be used to create any graphical design. PDL is the predecessor of the object-oriented CAD (Computer-aided design) language that is used in AutoCAD. Although no commercial program existed for PLATO, there was interest in creating a commercial product for the platform, so the two left the University of Utah in 1968 to form the PLATO CAD Corporation. The new company began producing a product called PLATO Drafting and PLATO Project which were CAD-like products running on PLATO. It also produced a book, PLATO Drafting and PLATO Project, by Larry Weiss. The PLATO CAD Corporation was purchased by the Autodesk in 1996. The PLATO CAD Corporation developed several products, including Autocad 1.0, which was released in December 1982. The program was written for the microcomputer platform from Digital Equipment Corporation (DEC),

HTML5 AutoCAD includes the possibility to export drawings to HTML5 formats, and include styles, JavaScript libraries, etc. The HTML5 options are: PDF using a third-party tool or inline in the file PNG using a third-party tool or inline in the file JPEG using a third-party tool or inline in the file SVG using a third-party tool or inline in the file BMP using a third-party tool or inline in the file It is possible to share and share parts of the drawing as HTML5 files and have them accessible through the "External References" section in the file. The drawing has to be opened first though. When opening a drawing that has been converted to HTML5, the following dialog window is shown: How to convert: All of the above options except for SVG and BMP can be embedded inside a file. (PDF and PNG embedded images are shown to the user but are not actually embedded.) XML It is possible to share the entire drawing in an XML file. When opening the XML file, AutoCAD shows a window called "DWG XML Options". All of the options are similar to those of the HTML5 options except that instead of PNG, the user can save the drawing as a PNG in the selected format and have it embedded in the file. It is also possible to include external references. The file can be used to check out and check in changes. Controllers Controllers for AutoCAD are macros that are used to control other AutoCAD functionality, such as commands, tools, palettes, dialog boxes, and so on. Controllers can be created using a macro language called AutoLISP. Controllers can also be created using Visual LISP. The Visual LISP syntax is similar to the Basic LISP (or more correctly the BASIC derivative Visual LISP) syntax. A Visual LISP script file (.lsp) contains a series of function definitions in the form of function headers, followed by the function body. The function headers define the function name,

return type, inputs and outputs, and optional comments. The function body contains the function body, including any initialization code and the function returns. Visual LISP supports variables of any data type, including complex, arrays, objects, and nested structures. Visual LISP also supports variable scoping. The AutoLISP syntax is ca3bfb1094

Central Asia's brand new strategic oil reserve in Tajikistan is situated in the Kara-Kum desert in the far northwest of the country. It was officially opened on July 11, and is the size of Malta, and can hold 120 million barrels of crude oil. The reserve was planned and built by the International Bank for Reconstruction and Development (IBRD), the private bank for big multinational oil companies, and is part of the 'New Silk Road', a Chinese initiative to link China with Central Asia. China's new Silk Road initiative opened in 2014 with the goal of creating the world's largest trade and investment network to link the vast energy resources of the region to the China and the rest of the world. China is currently the world's largest consumer of oil and natural gas, and Central Asia is home to about 15% of the world'

What's New In AutoCAD?

AutoCAD has always been known as an excellent tool for creating drawings that convey information, but the new Markup Import & Markup Assist gives AutoCAD an added edge to help you tell the story and convey your designs. Markup Import & Markup Assist includes Autodesk's new import/export features such as radial and oval annotation boxes, stylus annotation boxes, and user-configurable interactivity. And it includes new options for importing and exporting multiple layers. Another new feature is the highly interactive and user-configurable Markup Assist. Users can now use the tools they have available, like a mouse, pen, or stylus, to add annotation to drawings and transfer information, in real time, to your design. Markup Import & Markup Assist is designed to work together with the new Markup Browser. The new Markup Browser replaces the XREF (XRefs) files that previously held the user's drawing history, and can now hold the history of all the Markup Drawings. The Markup Browser now has an interactive tree view and is fully configurable. Markup Import & Markup Assist is part of the new AutoCAD 2023 release, which is available in the Autodesk Subscription Program. You can choose to buy AutoCAD 2023 as a new product or you can add AutoCAD 2023 to your current subscription. If you are a current subscriber, you will be notified when a new product is available, and you can upgrade your subscription from AutoCAD 2019 to AutoCAD 2023, or if you choose, you can purchase the new AutoCAD 2023 product. To buy the new AutoCAD 2023 as a new product, you can choose from AutoCAD Subscription or select the Autodesk 365 option and purchase AutoCAD 2023 for one year at the current AutoCAD 2019 subscription price. (A full year of AutoCAD Subscription and AutoCAD 2018 will be required to purchase AutoCAD 2023 for a year, and AutoCAD 2019 for one year will be required to purchase the new AutoCAD 2023.) New features in AutoCAD 2023: Print and Export: From AutoCAD 2018 Release, AutoCAD started to support this new feature which allows users to export drawings as vector PDF files. If you have Auto
