Field of the Invention The present invention relates to a method of identifying a layout of input data, the method being applied to a management system for managing logical volumes, and a computer readable recording medium on which a program of the method is recorded. 2. Description of the Related Art In recent years, with the development of computer technologies, there has been a tendency for an electronic data processing system to have a larger number of input/output ports. For example, a large-scale computer system has an input/output port group (e.g., main ports) for connecting external input/output devices, and a plurality of disk drive devices to be used as logical volumes (e.g., volume groups), and the computer system has a controller (e.g., a storage controller) and a shared memory for af5dca3d97
