MATS MATS is an acronym for Management And Technical Services, and is the functional, technical and service support that Autodesk offers to end-users. MATS has four areas: technical support, product support, customer service, and technical documentation and training. Technical support The technical support is a direct communication between the customer and the product engineering staff, and includes technical and material support by telephone, mail, fax, and email. This is Autodesk's method to answer and resolve technical issues, as well as for the execution of software updates and upgrades. Technical support also includes the documentation of those technical issues, which is made available to the customer via the help system. In addition, Autodesk has a technical support forum, which is accessible via Autodesk's Website, where they answer customer questions. Product support Product support consists of software updates and upgrades. The updates and upgrades are made available on Autodesk's website. Customers can also call customer service for more information. Another way for a customer to get this information is by submitting a technical support ticket to Autodesk for an upgrade. The customer service representative will walk the customer through the upgrade, if necessary. The customer service representative will also make note of the customer's concerns and incorporate them into future software updates and upgrades. Customer service Customer service involves providing information to the customer and the customer's community, including Autodesk's social networks. Autodesk provides the AutoCAD community on the web with a help system, customer service information and blogs. To obtain support or the latest software updates and upgrades, the customer can contact Autodesk via phone, email, or the Autodesk Website. Autodesk has also updated its installation package (Autodesk Installation DVD) to include all of Autodesk's software. This makes it possible to provide the latest software, updates, and upgrades to customers without having to worry about the software or updates being compatible with the software installed on the customer's computer. This Installation DVD is useful for both home users and small business users. A CD that includes all of Autodesk's software is also available for a small price. The CD is useful for training new users. Technical documentation Technical
