Larger Than Light is a fantasy novel by American writer Peter S. Beagle. It was published by HarperCollins in 1998, and the first edition included illustrations by Steven Salerno. Larger Than Light is about a colony of humans living on a spaceship ten light-years into space. Their spaceship is named Athal's Bell and was constructed through a collaboration of archangels, an assortment of angels, and other beings from the lower spheres of Heaven, Earth, and the Underworld. Later, when they arrive at their destination, they discover that the Culture has built a Homunculus, a giant consciousness, inside Athal's Bell's physical body. This forces their benefactor Gabriel to flee. The Homunculus is then turned against the colony and it ends up killing the planet's administrator. The humans try to restore the civilization of the planet, but are unable to communicate with it as it is too far away. The fate of the planet for the remainder of the novel is left unknown. Plot summary In the year 2001, Athal's Bell, an interstellar spacecraft, finally arrives at the orbiting planet of Earth—the last of the planet's star system to be reached. The crew finds it to be the most planet-like of all the known celestial bodies, and that it will supply more than enough food and air to support them for centuries. The planet is named Earth, and the crew initially settle into living peacefully on the planet's surface. Only after many weeks, the crew notices that the planet's clock is slowing. They begin to suspect that something is wrong with the planet itself. The clock on Athal's Bell is never perfectly accurate, but the crew can nevertheless feel a noticeable difference in the rate of their planet's slowing. Eventually, they realize that what is happening to the planet is a direct consequence of their arrival: the Culture—the race that visited Earth before the humans and foretold that a race of invaders would return only to be disappointed—has begun assembling a weapon against humanity. Perhaps through technology akin to Tachyon drives, the Culture is constructing a device under the planet. The device is called a "Time Transmitter," a giant bell that takes up most of the surface of the planet and is filled with antimatter. The bell is meant to alter the physical properties of time, causing it to slow down infinitely. The effect would be that of a

sandglass running down—but infinitely. In order to test the bell, the Culture places

A free, third-person, action-adventure game with a focus on story-driven and emotional gaming experience that centers around the themes of friendship and cooperation. The game's gameplay combines elements of exploration and puzzle solving. Everything about Life is Beautiful in My View With an "academic approach", The Company of My Elders decided to make a game that stands out with its unique ideas and originality. Its highly addictive gameplay has been full of new features and elements to create a masterpiece that have not yet seen in this genre.As the player controls the main character, a man who has lost his memory. Portia is on a quest to understand how he came to be in this place and how he can get out. In his quest, he must combine several objects to perform actions, do puzzles, avoid traps and reach his destination. Of course, along the way he will meet new characters, some of them more useful than others. Portia's gameplay combines adventure with puzzles, stealth, tactical gameplay, and exploration. Players will have to be careful to succeed in their quest. The game's graphics and presentation are the main focus of the game. We have chosen to go for a cute, but very powerful style: this would help the player identify what is what and where. The game's soundtrack will slowly calm and grow with the player's interest. The soundtrack will offer you various tracks of music throughout the game, each one will have its own character. The main mechanics of the game are very simple but powerful. The main mechanic comes from the Duality aspect of the game: the player will have to act in a certain way, and on the other hand, using the same mechanic, the player will have to go against his initial idea. Therefore, the player has to change his mind when he tries to solve a puzzle or a trap. It is in the player's hands how he will respond, and this will result in a totally different scene. A few examples of this mechanic: The player wakes up from a long sleep, and with one single pick of the morning he can hear a beautiful song. The player explores a room, and discover a note that tells him to pay close attention to a certain bed. The player

hears footsteps behind him, and in a second, a trap is closing in on him. The player accidentally hits an object that opens a secret door. The player notices two gun barrels pointed at him, and as he holds his breath
