StatesQ: Mysql and php 5 syntax

problem I am trying to learn php 5's

mysql syntax and i'm having trouble

with some basic stuff. here is my php code: `prepare("SELECT * FROM stories WHERE bl_author=?"); $rs->execute(array('Digger')); $fav = $rs->fetchAll(); print_r($fav);` ?> this code is pretty basic. It just outputs the database row from the stories table. (the bl_author column is the author of the story) Here is the error I am getting: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'WHERE bl_author=?' at line 1 As far as i know, the bl_author field should be the WHERE clause of the query

(see the manual). I am confused about where and why i am getting this error. Thanks for any help. EDIT Here is the error log in phpmyadmin: A: The database server is complaining about a SQL injection vulnerability, because the prepared statement doesn't have the quoted value of the WHERE clause. By using the correct escaping rules for field names, such as ``, you can make sure that the query is safe. I would also recommend that you use the parametrized version of execute() (which is what that error implies) if possible, although the manual page makes it sound like it's not mandatory

in this case. ... \$rs =
\$dbc->prepare('SELECT * FROM
stories WHERE bl_author=
