Roblox is a platform game creation system that has launched over 180 games. The platform allows for easy, intuitive, and collaborative game creation. The game creation process is as simple as writing a program and dragging the game objects into the world. Use built-in tools to control what happens, or program everything from the ground up with Lua, the programming language Roblox was built with. Each game runs in its own world that is sandboxed, meaning players can only modify objects and files inside the world. Roblox is open source, so game developers can see Roblox's source code and there are some user-made games available to play for free. Allowing users to create games has come at some cost, however, in that the free user experience is inferior and there are multiple programs, called hosting websites, that host user content from Roblox and other developers. This gives Roblox less hosting control and the free version of Roblox is accompanied by advertising and in-app purchases. Developers hosting their games on Roblox receive 70% of the revenue and Roblox also take a 30% cut of the revenue. As of May 1, 2012, Roblox's store removed in-app purchases, but they remain available to premium users. As of 2016, Roblox has a membership of over three million monthly active users who make in-game purchases with Robux. One of the most popular games on Roblox is Minecraft, and by February 2015, the site had a total of 2 million daily active users. In addition to Minecraft, Roblox hosts games with genres including survival, racing, action, fighting, and others. Roblox has become a popular site for social gaming, with many people creating games based on popular TV shows and movies. The most popular show is Stranger Things. Origins and Philosophy Roblox is the result of the minds of Dave Baszucki and Erik Cassel, two friends who grew up in the Midwest and studied computer science in college. They met in 2005, and after college they formed a small game development company called KBMOD. KBMOD was operated out of the basement of Baszucki's home. They considered KBMOD a company for their own amusement, but it was not a serious endeavor. They never considered making money with KBMOD, but they did publish a few games on Shareware websites and lost interest in KBMOD in 2007. In 2007, at age 23, Bas
