Dulce et Decorum Est (Rest in Peace): There are several of us who will be attending a baptism party on the Solstice on Saturday. We have heard so many wonderful accounts of the salvation we experienced at that event that we really can't wait to attend again! One of the speakers, Skip Wiles, has written an account of his life prior to his conversion that stands as a solid testimony of grace. The title of his book is "Dulce et Decorum Est" - sweet and beautiful is the truth. If you are interested in buying this book, it is available at the bookstore on the Solstice. Q: Why does ADT want a "honeycomb" application for the Nexus 7? A lot of the tutorials I see around the web these days are focused on supporting tablets, since most of the tablet users seem to be using Honeycomb. I've been trying to get the ADT plugin to run on the Android device version (2.3.4), but it complains about: Failed to parse configuration namespace:platform Attribute name:android.software.version Code: 0 Is the Android/ADT plugin for the Nexus 7 not compatible with a 2.3.4 version of Android? A: Yes this is because Google have released an update to Android for the Nexus devices, so you can't use the ADT or get its plugins in 2.3.4. The Google Nexus devices are updated to Android 3.1 Honeycomb. You can add the Google Nexus devices to your project but in order to see them you have to use Android SDK version 3.1. Other examples of using the Google Nexus 7 here: Android Swipe-to-Lock App Tricks - Remembering Transparent Bitmap How to Create a Live Wallpaper in Android Adding Books to the Google Play Books Application The actual code to run your application is probably still in 2.3.4 but not the ADT plugin. You'll have to switch to an

If you are using a passive cooler, then the only way you can see the difference between the two chips is if you have an active cooler installed, as then you will see the core temperatures at half load. 7.8 GHz is around 335 C (645 F)Among the many hyper-knowledgeable players who have informed us in recent days that Moscow is the breeding ground for the new cyberwars, Igor Korotchenko is something of an oddball. He has identified scores of likely Russian efforts to infect and contaminate political discussion on hundreds of news media outlets. But Mr. Korotchenko, who is also director of the Institute for National Security, Research and Analysis in Moscow, is perhaps best known for his research on the evolution of the Islamic State's chemical weapons program, which he published earlier this year. Here, he draws on the latest examples of that program, which include cyber weapons to track enemies on the battlefield and kill them by manipulating their nerve gas. Emanation from the Caucasus Mr. Korotchenko has a new book out this summer, "Chemical Arsenal: ISIS and the Menace of Chaos." And in an interview, he assessed Islamic State's use of chemical weapons. It's come in quite a few forms. Over the last year, the Islamic State has resorted to chemical weapons more than 40 times. Almost half of those attacks were on their own enemies, including local authorities and the Kurds. But the Islamic State has also used it against the "enemy" — as it 648931e174

If you have the same problem as me and the solution you.Contents Rakarr's(TM) Hybrid Super Defender vs the Ulfang's(TM) The Flame Dragon The Ulfang's are the resident troll empire of the Dalaran(TM) area. Their palace lies atop the center of the volcano of Imbuin, deep within their necropolis. Dalaran is the capital of Trollheim and the largest city in the Kael'thas(TM) area. The Ulfang's were formed after their world was destroyed many years ago and they settled deep in the cold north of Northrend(TM). History The Flame Dragon, one of the four leading elemental dragons(TM), has been trapped deep below the earth by the Ulfang's for many cycles. All of the others were killed, but the Flame Dragon has endured. The Ulfang's have been using it's essence to power their mecha, the Flame Dragon. The Flame Dragon's summoned energy would be used to power the creation of body armor, weapons and other equipment for their troops. The Flame Dragon guarded the gateway to the necropolis. The Flame Dragon was one of the main reasons why the Horde(TM) vs. Alliance(TM) War began. Battle with the Warmongers The Ulfang's first encounter with the Alliance(TM) at the Orgrimmar(TM) Garrison(TM) was a victory. The alliance poured out of the Horde Base. The Ulfang's were able to slaughter a large amount of the Alliance. The Horde General, Darth Tana'q then decides to take charge of the situation. He had, over the course of time, gained an extensive knowledge of the Ulfang's, its leadership and generals. Darth Tana'q's(TM) plan was to lead a small force of Horde(TM) into the necropolis. He hoped that the invaders could see that he was the true leader of the Horde and the Alliance. After he initiated the attack, he expected a major engagement with the Flame Dragon. If the Ulfang's were defeated, then the Flame Dragon would escape. The Flame Dragon made its way back to the surface and rendezvoused with an Alliance attack force. The Horde would be crushed. If only the Flame Dragon had released its energy in its own defense

The IGM demonstrated superior repeatability and accuracy relative to the USP, which is accepted as the standard measurement device for a number of hematologic parameters, including the CBC and indices of thrombocytopenia. Furthermore, the IGM is cost-effective, with an initial investment of ~\$100 [[B13]] (the IGM costs approximately \$150 to \$250 with an additional \$100 for equipment including the electrophoretic cartridge) compared with \$3500 [[B5]] for a single USP device (if available) [[B4],[B5]]. Although reference intervals and standard curves based on the IGM have been developed and validated for RBC counts, WBC counts, and platelet counts [[B9],[B13]-
