“Meat Log Mountain” 1.5 “ review by jonathan greenfield for jay is games . Guide to the films of animator and tv/film director Hayao Miyazaki.

Ranging from his early work, such as .Q: Django internationalization for Django Rest Framework API and view/detail templates My application allows users to manage multiple different properties, each with their own dedicated views and detail views. My problem is that I don't want to translate the DRF serializers/models, since they only make sense in the context of their individual models and views.

Also, it feels better to have one version of the application in English, with other versions available in other languages. This is fine for the models, but I don't know how to translate the views, which are the actual interface that the user sees. I know I should use the `i18n_patterns`, but I'm not sure how to do this without introducing translations into the application in a way that doesn't feel natural. Any examples of how this is done that you can point me towards? A: I think this is a common problem. You can use a dictionary of translation keys to translate views, for example. If I understand you correctly, the following information may help you. Django REST Framework and Django localization Using `django-rest-framework` in multiple languages was

not able to sublime significantly, the gas beneath it would be too dense. With the correct energy input, liquid water could be sublimated and provide the Earth's early atmosphere with an oxygen rich source [Schrattenberger et al., 2008]. This has important implications, because, as I will show in the next section, it tells us that the planet's early atmosphere must have been nitrogen rich, which is a known greenhouse gas. We can use this fact to add to the debates that are discussed in this section. For instance, we can show that the removal of early Venus's massive greenhouse gases caused a runaway greenhouse effect, while, if we compare Venus and Mars' atmospheres, we can conclude that Mars' atmosphere was very similar to that of Earth around 3.9 billion years ago
