Procedure open computer open the control panel find the HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon create a new key using the name comdlg as password change the value of the new key from 0 to 1 close the registry editor Notes By default, the "Save" dialog box will not prompt the user for saving every time the user presses the Save button on the Windows control panel. If you are having trouble with this, set "Save always". Another option is to use "Do not save" to prevent Windows from saving any changes made to the desktop. Working through this tutorial is recommended if you haven't done any Windows scripting in the past. How to create the registry entries: First, search for the Windows registry in the Control panel. Now, look for the location that has the path name as HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon. Next, create a new key named comdlg using the name as a password. Now, change the value of the key to 1. Don't remove the key. Close the registry editor if you are done. Syntax Function Name Description  
RegCreateKey Create a registry key in which you define the required data to be stored RegWrite Write to the registry RegGetValue Read the data stored in the specified key RegQueryValue Query the registry for the specified key Return the value (string data type) GetValue Set the data type of the returned value as the specified type (the format specified below) RegSetValue set the data type of the returned value as the specified type (the format specified below) Return none Constant to name the registry key, whose value you want to change Name of the new registry key Password used to create the key The value Value of the registry key to be updated Type of the value to be updated The format of the values Value of the new registry key Key name of the registry key The values of the registry key to be deleted The format of the values ' ' Set the data type
