> Help us to improve the

---

translation. > In addition, you can translate using free GoogleTrans Crack For Windows Web Services API, > a reliable and easy to use method to get your site translated. > To use the Google Translator API, we ask you to fill this form ( > and you can use the API calling an URL like this one: > > The API returns the list of supported languages, and an XML string containing all the translated text. The script is using this service. > You must set

---

Google & OpenID as Source/Target languages for it to work properly. > Because Google Translator does not allow to work in local languages, you can use it to translate an URL in any supported language, and the internal cache will be used to translate it automatically. > The JavaScript function calls the server using AJAX to get the translated page, so the output is not visible in the browser. > - local translation (automatic translation): if you

---

access to avito.com in a supported language, it is correctly translated. > - Google Translator translation: if you access to avito.com in any other language than the source, the language of your browser's configuration is used for the translation. > When the page is translated, you can save the output in a file using the advanced settings in the preferences panel. > Now there are many options available to customize the output: > - background

---

color of the translation  
(default is white), > -  
background color of the text  
(default is white), > - title of  
the output file (default is  
avito.com), > - title of the  
document (default is  
avito.com), > - enable auto-  
scroll after the translation  
(default is on), > - enable auto-  
scroll after the translation  
(default is on), > - enable  
"Auto scroll to bottom"  
(default is on), > - enable  
"Auto scroll to top" (default is  
on), > - enable "Spell check",

---

> - enable "Automatic  
correction of translation
