Back in 1994, I had a friend who started erasing a few pixels from a photo and just kept pushing it around, creating one of the most beloved memes of all time. Thank goodness all the competition has leveled the playing field. I was pleasantly surprised by the sheer amount of tutorials available to the beginning photographer. These are appropriate to beginners as well as experts. In-depth coverage of specific techniques for improving that "one photo" can be found here: I am already brainy, so I'm not into the whole image-forming "skills" stuff. If you are, you might want to go to the Photoshop Classroom instead. There you can work with professional photographers, learn Photoshop techniques and techniques, and get a huge amount of help interpreting and using Photoshop. At this point, I've moved to the Private Submissions tab, where you can send the Adobe and Retouch team feedback on specific tutorials by certifying the content (or requesting changes to it). More importantly, I use this to contribute more content and advice. I decided to do that to help you learn better, since I'm also not into the whole image-forming "skills" stuff. I'm 3,000 words deep in this thing (my writing process is a little convoluted, but I'm sure you understand what I mean about the braininess). If you are new to images, like myself, it's harder than it sounds, but there are a few good, basic programs you might want to consider. I recommend Gimp, which has a steep learning curve, but is easy to learn. In fact, it's really easy to learn. Gimp is free and open source, so if you really want to learn the ins and outs of image manipulation, this is the place to start.
