The first time I used Lightroom, I expected a large, bloated application that could do little beyond cataloging and uploading photos. But this product is so much more than that. For one thing, it's fast. On my XPS 13, it's perfectly responsive with images thumbnails and previews. Many people think this is Lightroom's most attractive feature, and for good reason: It works like magic. As a student, I used to upload hundreds of photos each morning in the morning, and I could switch between projects without a second thought. I quickly learned that compared to any other application, Lightroom is capable of the most functions, and at the same time, it never uses a lot of memory or processing power. Thanks for this review. I cant wait for the new adobe lightroom and photoshop review. Having used photoshop 10+ years ago, I will also appreciate the newer version of photoshop with the capabilities for retouching. Sincere thanks. Thanks. Just want to let you know it does work well with the Fujifilm X-E1. I found that using Natural or the Sepia type was the best results I got when de-selecting the X-Trans sensor procesor from X-Pro II. However you would have to select "Processing" to use the software processing for correct WB and exposure in the X-Pro II. One problem is that the Fujifilm camera that I have is a little old. It records everything in RAW, such as EXIF data. It would be nice if there was a simple solution to correct the WB and exposure of the RAW image before converting the RAW file into a jpg. But I will continue using the X-Pro II for the time being. Cheers, Chuck

You can apply a similar look to repeat edits with the Adjustment Profiles to get them consistently in all your pictures.

For web designers, nothing is more important than pixels. That's why it's important that your site is pixel-perfect. For this you need a pixel-calibrating tool like Photoshop. It has a grid that allows you to make sure that your site's design fits with the site's pixels. Once you have a good grasp of where your design stands, you give it an outline, then add a final layer.
