"SQL Scripts" With this new feature, you can script almost any DBMS! And now you can run all of them, just by making use of the parameters that are provided with each script. "FastScripts" The FastScripts added to this version of Foxy SQL Free. With this feature, you can create your script by selecting the command, the datatype and the tables you need. And the more databases you use, the more items you can add to this list. It is possible to export this information into files that contain all of the SQL statements you need. "SQL Map" With SQL Map, you can edit the existing SQL commands that are provided by SQL Server. With this feature, you can select a query and make the script readable. And you can edit the fields and properties of each field. "New Thread" New Thread has been added to Foxy SQL Free 4.6. This feature allows you to assign a user to a new thread. You can create new threads as many as you need.
