For example, if you'd like to create a new product figure so that a border, for example a belt loop, would be located appropriately, Doing so is pretty simple using the supplied tool, with no need for referencing or keeping your original drawing. I like it. Adobe Photoshop CS6 now supports multiple monitor setup natively. It also lets you easily move windows from one monitor to the next. This is a clever feature and one I've been longing for. I view two monitors as a way to have more room for virtual desktops and organize my workflow. This is a clever idea. Adobe uses a minibar in the upper left corner to bring up a panel of available tools. This panel includes six tools that are sort of like the standard Photoshop tools. But instead of a tool, a selection box is available for a particular tool. For those familiar with Photoshop, this seems kind of strange. But I can see it working well as a way to grab text and shapes without the need to select anything.
