courafranc (mercredi, 22 Dec 2021 23:29) . Can you link again? I didn't quite understand what "elongated and longer than standard" means. If it's just "longer", then what's the difference? How do they differ structurally? The picture in the first post shows coils for a two-stroke motor. For a four-stroke engine, these are two coils connected in series. And why do they have different terminals? In my understanding it should be just "4 coils connected in series". So they just have different terminals? Or are they different coils?
